MOSQUITO LARVICIDE

FOR USE ON SEWAGE AND DRAINAGE DITCHES, CATCH BASINS, SALT MARSHES, SWAMPS AND STAGNANT WATER POOLS.

KILLS LARVAE AND PUPA STAGES OF MOSQUITOES

ACTIVE INGREDIENTS:
Mineral Oil .......................................................... 98%

INERT INGREDIENTS: ........................................... 2%

Total ................................................................. 100%

KEEP OUT OF REACH OF CHILDREN

CAUTION
See other panel for additional precautionary statements.

NET CONTENTS: 55 Gallons

FIRST AID
Have the product container or label with you when calling a poison control center or doctor, or going for treatment. You may all contact the National Pesticide Information Center at 1-800-858-7378 for emergency medical treatment information.

If Inhaled:
• Move person to fresh air.
• If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably by mouth-to-mouth, if possible.
• Call a poison control center or doctor for further treatment advice.

If Swallowed:
• Call poison control center or doctor immediately for treatment advice.
• Do not give any liquid to a person.
• Do not induce vomiting unless told to do so by the poison control center or doctor.
• Do not give anything by mouth to an unconscious person.

Note to Physician: Contains mineral oil -- vomiting may cause aspiration pneumonia.

PRECAUTIONARY STATEMENTS
HAZARDS TO HUMANS AND DOMESTIC ANIMALS –

CAUTION: Harmful if inhaled or swallowed. Avoid breathing spray mist. Remove contaminated clothing and wash clothing before reuse. Wash thoroughly with soap and water after handling.

ENVIRONMENTAL HAZARDS
Do not apply directly to water, except as directed for use on this label. Do not contaminate water by cleaning of equipment or disposal of equipment washwaters.

DIRECTIONS FOR USE
It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

STORAGE AND DISPOSAL
Do not contaminate water, food or feed by storage or disposal.
Pesticide Storage: Store and transport in an upright position. Store in in original container in a cool, dry area.
Pesticide Disposal: Wastes resulting from the use of the product may be disposed of on site or at an approved waste disposal facility.
Container Disposal (plastic containers): Triple rinse, or equivalent. Then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or incineration, or if allowed by state and local authorities by burning. If burned, stay out of smoke.
Container Disposal (metal containers): Triple rinse, or equivalent. Then offer for recycling or reconditioning, or puncture and dispose of in a sanitary landfill, or by other procedures approved by state and local authorities.

Bonide® Mosquito Larvicide can be used all season long; does not depend on life cycle timing for effectiveness. It kills by suffocation and mosquitoes do not develop resistance. The last application of the season is as effective as the first. Does not stain or deface the environment with dark oily films or residues.

GROUND APPLICATION: One to five gallons per acre (3 to 15 fl. oz. per 1,000 sq. ft.) depending on water surface conditions and vegetative density. Use 1 to 2½ gallons per acre (3 to 7½ fl. oz. per 1,000 sq. ft.) if trees are in green tip stage and vegetative cover is light and water is essentially clean. To penetrate heavier or denser vegetative cover, or if water is substantially polluted, use 2½ to 5 gallons per acre (7½ to 15 fl. oz. per 1,000 sq. ft.). An average rate of 2½ to 3 gallons per acre (approximately 1 quart to 5,000 sq. ft. – 50’ x 100’ area, 7½ to 9 fl. oz. per 1,000 sq. ft., or 2 to 4 teaspoons per 100 sq. ft.) of water surface covers most conditions.

AERIAL APPLICATION: Two to four gallons per acre for salt marshes and swamps. Adjust for vegetation or surface conditions. Average rate of 3 gallons per acre (36 gallons per 100 ft. swath mile) covers most conditions.

Apply to leave a thin film over surface of breeding areas. Include treatment of drainage ditches, catch basins, stagnant pools, open sewage basins to improve overall control. Since high pressures or high velocities are not needed, lighter less expensive equipment can be effectively used. Since mosquitoes can hatch in 5 - 7 days of warm weather, any stagnant water expected to be exposed for that period or longer should be treated.

For information on pesticide products (including health concerns, medical emergencies, or pesticide incidents, call the National Pesticide Information Center at 1-800-858-7378.
