This product conforms to the description and is suitable for the uses set forth on this label but is strictly limited to those uses solely as directed under the specified label conditions, and only if purchased in the original unopened container. TO THE EXTENT CONSISTENT WITH APPLICABLE LAWS, MANUFACTURER AND SELLER DISCLAIM ANY AND ALL WARRANTIES, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO WARRANTIES OF MERCHANTABILITY AND FITNESS FOR PARTICULAR PURPOSE (except as specified on this label). Buyer and all users shall assume all risk, liability and damage if this product is used, stored, handled or applied other than as specifically set forth on this label. TO THE EXTENT CONSISTENT WITH APPLICABLE LAWS, LIABILITY OF MANUFACTURER AND SELLER AND USER’S REMEDIES SHALL BE LIMITED TO REFUND OF THE PURCHASE PRICE OR REPLACEMENT OF THE SPECIFIC QUANTITY INVOLVED. TO THE EXTENT CONSISTENT WITH APPLICABLE LAWS, IN NO EVENT SHALL MANUFACTURER OR SELLER BE LIABLE FOR SPECIAL, INCIDENTAL OR CONSEQUENTIAL DAMAGES.

Note: This pesticide is to be sold only in this original unopened container.

FIRST AID
If on skin or clothing:
• Take off contaminated clothing.
• Rinse skin immediately with plenty of water for 15-20 minutes.
• Call a poison control center or doctor for treatment advice.

If swallowed:
• Immediately call a poison control center or doctor.
• DO NOT INDUCE VOMITING unless told to do so by a poison control center or doctor.
• Do not give any liquid to the person.
• Do not give anything by mouth to an unconscious person.

If in eyes:
• Hold eye open and rinse slowly and gently with water for 15-20 minutes.
• Remove contact lenses, if present, after the first 5 minutes, then continue rinsing.
• Call a poison control center or doctor for treatment advice.

If inhaled:
• Move person to fresh air.
• If person is not breathing, call 911 or an ambulance, then give artificial respiration, preferably mouth-to-mouth, if possible.
• Call a poison control center or doctor for further treatment advice.

HOT LINE NUMBER
Have the product container or label with you when calling a poison control center or doctor, or when going for treatment. You may also call 1-918-594-6000 for emergency medical treatment information 24/7.

NOTE TO PHYSICIAN
Contains petroleum distillates. Vomiting may cause aspiration pneumonia. Aspiration may occur after swallowing or vomiting and results in serious, and sometimes delayed, lung injury.

ENVIRONMENTAL HAZARDS
Do not apply directly to water, except as directed for use on this label. Aquatic organisms may be killed in waters where this product has been inadvertently mixed with water (milky appearance). Do not apply this product under high pressure or at high velocity.

SPRAY DRIFT MANAGEMENT
A variety of factors including weather conditions (e.g., wind direction, wind speed, temperature, relative humidity) and method of application (e.g., ground, aerial, aerial) can influence pesticide drift. The applicator and grower must evaluate all factors and make appropriate adjustments when applying this product. Do not apply at wind speeds greater than 15 mph at the application site. Apply as a medium or coarser spray (ASABE standard 572), and the minimum volume mean diameter (VMD) for spinning atomizer nozzles. If applying at wind speeds less than 3 mph, the applicator must determine if a) conditions of temperature inversion exist, or b) stable atmospheric conditions exist at or below nozzle height. Do not make applications into areas of temperature inversions or stable atmospheric conditions.

GROUND-BASED EQUIPMENT APPLICATION:
Apply using a nozzle height of no more than 4 feet above the ground or crop canopy.

AERIAL APPLICATION:
For aerial applications, do not release spray at a height greater than 10 feet above the ground, water surface or the top of plants to be sprayed. The boom length must not exceed 90% of the rotor blade diameter. When applications are made with a cross-wind, the swath will be displaced downward. The applicator must compensate for this displacement at the downwind edge of the application area by adjusting the path of the aircraft upwind. Leave at least one swath unsprayed at the downwind edge of the treatment area.

APPLICATION INSTRUCTIONS
Equipment used to apply other materials should be cleaned by rinsing first with diesel fuel or fuel oil, then with this lavericide. Because lavericides can be unstable within 5 to 7 days of warm weather after egg deposition, stagnant water exposure to be exposed for such a period of time should be treated.

GROUND APPLICATION:
(Hand gun or Hand Wand Sprayer). Apply this product at rates of one (1) to five (5) gallons per acre (3 to 15 fl oz per 1,000 sq ft) depending on water surface conditions and vegetation density. Use 2.5 to 5 gallons per acre (7.5 to 15 fl oz per 1000 sq ft) when 1,000 sq ft or less is to be treated in green tip stage, vegetative cover is light, and water is relatively clean. To penetrate heavier or denser vegetative cover or if water is substantially polluted use 2.5 to 5 gallons per acre (7.5 to 15 fl oz per 1000 sq ft). An average rate of 2.5 to 3 gallons per acre (approximately 1 quart to 5,000 sq ft – 50° x-100° area) for surface water covers most conditions.

AERIAL APPLICATION:
Apply this product at rates of two (2) to four (4) gallons per acre for salt marshes and swamps. Apply the rate at which these limits adjust the application rate according to surface conditions. An average rate of 3 gallons per acre (36 gallons per 100 ft swath mile) covers most conditions. Apply product to leave a thin film over the surface of mosquito breeding areas. Include ground-based treatments of drainage ditches, catch basins, stagnant pools, and open sewage basins in control. Apply product to leave a film over the surface of mosquito breeding areas. Include ground-based treatments of drainage ditches, catch basins, stagnant pools, and open sewage basins in control. Apply product to leave a thin film over the surface of mosquito breeding areas. Apply lavericide near the shoreline at the 1-foot mean lower low water line. It is recommended for salt marshes and swamps. Within these limits adjust the application rate according to surface conditions. An average rate of 3 gallons per acre (36 gallons per 100 ft swath mile) covers most conditions. Apply product to leave a thin film over the surface of mosquito breeding areas.
